

Fehlermeldungen, Spam, Viren

Temp Verzeichnis in WP

Wenn in Wordpress ein eigenes tmp Verzeichnis benötigt wird, muss man in der config Datei folgendes eintragen:

```
define('WP_TEMP_DIR', dirname(__FILE__) . '/wp-content/temp/');
```

Das sind die Fehlermeldungen dazu (ganz schön viele für so einen kleinen unschuldigen Temp Ordner):

Fatal error: Uncaught UnexpectedValueException: DirectoryIterator::__construct(/tmp/):

```
-----  
failed to open dir: Permission denied in  
/www/htdocs/w00....  
/ordner/ordner/wp-content/plugins/tribe-ext-pdf-tickets/vendor/mpdf/mpdf/src/Cache.php:87  
-----
```

```
